

**μHVIC™**

**SOT-23 Gate Driver IC**

**Features**

- Wide VCC range (5V to 20V)
- CMOS Schmitt-triggered inputs
- Under voltage lockout
- 3.3V logic compatible
- Enable input
- Output in phase with inputs
- Leadfree, RoHS compliant

**Product Summary**

|                 |                |
|-----------------|----------------|
| Topology        | General Driver |
| IO+/- (typical) | 1.5A           |

**Typical Applications**

- General purpose gate driver
- Industrial applications
- Switched-mode power supplies

**Package Options**

**Typical Connection Diagram**

**Ordering Information**

| Base Part Number | Package Type | Standard Pack |          | Orderable Part Number |

## **Description**

The IR44272L is a low-voltage, wide VCC range, power MOSFET and IGBT non-inverting gate driver. Proprietary latch immune CMOS technologies enable ruggedized monolithic construction. The logic input is compatible with standard CMOS or LSTTL output. The output driver features a current buffer stage. The design also includes an enable input with internal pull up.

**Qualification Information<sup>†</sup>**

| <b>IC Latch-Up Test</b>           |                  | Class 1 Level A<br>(per JESD78)   |
| <b>RoHS Compliant</b>             |                  | Yes   |

- † Qualification standards can be found at International Rectifier's web site <http://www.irf.com/>
- †† Higher qualification ratings may be available should the user have such requirements. Please contact your International Rectifier sales representative for further information.
- ††† Higher MSL ratings may be available for the specific package types listed here. Please contact your International Rectifier sales representative for further information.

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. The device may not function or not be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

| Symbol     | Definition                               | Min  | Max            | Units |
|------------|--|------|----------------|-------|
| $V_{CC}$   | Fixed supply voltage                     | -0.3 | 20             | V     |
| $V_O$      | Output voltage                           | -0.3 | $V_{CC} + 0.3$ |       |
| $V_{IN}$   | Logic input voltage                      | -0.3 | $V_{CC} + 0.3$ |       |
| $R_{thJA}$ | Thermal resistance, junction to ambient  | —    | 151            | °C/W  |
| $T_J$      | Junction temperature                     | —    | 150            | °C    |
| $T_S$      | Storage temperature                      | -55  | 150            |       |
| $T_L$      | Lead temperature (soldering, 10 seconds) | —    | 300            |       |

## Recommended Operating Conditions

For proper operation, the device should be used within the recommended conditions. All voltage parameters are absolute voltages referenced to COM unless otherwise stated in the table.

| Symbol   | Definition                      | Min | Max      | Units |
|----------|---------------------------------|-----|----------|-------|
| $V_{CC}$ | Fixed supply voltage            | 5.0 | 18       | V     |
| $V_O$    | Output voltage                  | 0   | $V_{CC}$ |       |
| $V_{IN}$ | Logic input voltage (IN and EN) | 0   | $V_{CC}$ |       |
| $T_A$    | Ambient temperature             | -40 | 125      | °C    |

### Static Electrical Characteristics

$V_{CC} = 15V$ ,  $T_A = 25^\circ C$  unless otherwise specified. The  $V_{IN}$  and  $I_{IN}$  parameters are referenced to COM and are applicable to input leads: IN. The  $V_O$  and  $I_O$  parameters are referenced to COM and are applicable to the output leads: OUT.

| Symbol      | Definition                                  | Min  | Typ  | Max  | Units   | Test Conditions             |               |
|-------------|---|------|------|------|---------|-----------------------------|---------------|
| $V_{CCUV+}$ | Vcc supply UVLO positive going threshold    | —    | —    | 5.0  | V       |                             |               |
